REDROCK

WE HAVE A BOLD VISION FOR DECARBONISING INDUSTRY

We are passionate about electrifying businesses with green powered innovation. Our locally manufactured, off-grid power solutions and transportable workspaces, cribrooms and ablution blocks make industry's net zero aspirations a reality.

Transportable building options for every worksite.

MADE IN KARRATHA · MINIMISING IMPACT ON COUNTRY · 100% SOLAR POWERED

Red Rock is an Aboriginal-led business with a passion for minimising impact on Country. We passionately believe that with the technology, the engineering capability and the resources we have today, we can do things differently and ensure a sustainable future for the next generation.

As an engineering and contracting services business, with the full suite of industrial expertise across Structural, Civil and Environment, Construction, Building and Facilities Maintenance on hand, we draw on our individual strengths to ensure we achieve the best possible outcome for our clients.

Our fleet of transportable units can be furnished and configured to suit your needs whether that be a heat respite room, site office, or lunchroom. Unlike other portable ablutions and amenities, our Sunny Dunnys offer a private, secure and cool space when you need it most. Offering separate access for all users, with customisable configurations of multiple cubicles. Equipped with solar power and battery storage, these units are designed to remain operational without reliance on sunlight.

Our units are equipped with an integrated cyclone ballast system, eliminating the need for traditional concrete blocks. This innovative system ensures stability and compliance with cyclone-rated standards while simplifying installation and reducing setup time.
